

What is claimed is:

1. A business management support method in which computers of a service provider, a service beneficiary,
5 a service intermediary and an intellectual service cooperator are connected via a network with one another, said method comprising:
- an information collecting step which includes collecting enterprise information from said computer of
10 said service beneficiary;
- a requesting step which includes providing said collected enterprise information to said computer of said intellectual service cooperator to make a request for consultation; and
- 15 an information providing step which includes posting said computer of said service intermediary on the results of consultation received from said computer of said intellectual service cooperator, and adding service intermediary transaction information to said
20 results to create support information for provision to said service beneficiary.
2. The method according to claim 1, wherein said service intermediary is a bank which has dealings with
25 said service beneficiary.
3. The method according to claim 1, wherein said

FOI b7c b7d 22842660

information collecting step includes collecting enterprise information of said service user input to said computer of said service provider and collecting enterprise information acquired from said computer of said service beneficiary through ASP (Application Service Provider) service by which said computer of said service provider provides applications.

4. The method according to claim 1, wherein said information providing step includes providing on line enterprise support information created by said computer of said service intermediary to said computer of said service beneficiary.

5. The method according to claim 1, wherein said information providing step includes outputting enterprise support information created by said computer of said service intermediary to a handheld terminal for service intermediary, for off-line provision to said service beneficiary.

6. The method according to claim 1, wherein said information providing step includes setting flag information into enterprise support information created by said computer of said service intermediary, said flag information permitting said service beneficiary to make access to said computer of said intellectual service

009483-10124

beneficiary by way of said network to accept a direct support.

7. The method according to claim 1, wherein
5 depending on predefined follow levels, masking is
effected in sequence on enterprise information
collected in said information collecting step,
enterprise information provided to said computer of said
intellectual service cooperator in said requesting step,
10 and the results of consultation on which said computer
of said service beneficiary is posted in said information
providing step.

8. The method according to claim 7, wherein when
15 said follow level is a maximum level, said enterprise
information and said results of consultation are
completely indicated without masking, and wherein when
said follow level is a minimum level, masking is made
on attribute information other than requisite items in
20 said enterprise information and said results of
consultation, and wherein when said follow level is a
level lying between said maximum level and said minimum
level, said attribute information is indicated
partially or in a simplified manner.

25

9. The method according to claim 1, wherein said
intellectual service cooperator includes an auditing

said service beneficiary.

12. A computer readable record medium having thereon recorded a business management support program to be run
5 by a computer of a service provider which is connected via a network with computers of a service beneficiary, a service intermediary and an intellectual service cooperator, said program comprising:

an information collecting step which includes
10 collecting enterprise information from said computer of said service beneficiary;

a requesting step which includes providing said collected enterprise information to said computer of said intellectual service cooperator to make a request
15 for consultation; and

an information providing step which includes posting said computer of said service intermediary on the results of consultation received from said computer of said intellectual service cooperator, and adding
20 service intermediary transaction information to said results to create support information for provision to said service beneficiary.

13. A business management support system having a
25 network via which computers of a service provider, a service beneficiary, a service intermediary and an intellectual service cooperator are connected with one

2025 RELEASE UNDER E.O. 14176

result of provision of said enterprise information thereto from said computer of said service provider, said results of consultation being accepted in the form of support information including service intermediary transaction information added to said results of consultation when said results go through said computer of said service intermediary.

15. A business management support system implemented by a computer of a service beneficiary which is connected via a network with computers of a service provider, a service intermediary and an intellectual service cooperator, said system comprising:

an information providing unit which provides enterprise information in response to a request from said computer of said service provider; and

an information accepting unit which accepts the results of consultation received from said computer of said intellectual service cooperator as a result of provision of said enterprise information thereto from said computer of said service provider, said results of consultation being accepted in the form of support information including service intermediary transaction information added to said results of consultation when said results go through said computer of said service intermediary.
